PROFESSIONAL SUMMARY

Full-Stack Web and Web3 Developer with over 5 years of experience, specializing in Node.js, Angular, and React. Expert in developing scalable web applications, decentralized solutions, and high-performance backend systems. I have strong problem-solving skills and a broad ability to work autonomously, ensuring innovation, scalability, and efficiency in each project.

Back-end Experience: Application development with Node.js applying Clean Architecture, Domain-Driven Design, design patterns, and SOLID principles to ensure clean, scalable, and maintainable solutions. Implementation of automated testing through Test-Driven Development (TDD). Design and implementation of scalable microservices architectures, ensuring code quality and security with tools such as SonarQube. REST-rich APIs optimized for high performance and low-latency responses, with CI/CD pipelines (GitHub Actions) for automated testing, deployment, and documentation.

Front-end Experience: Implementation of web applications using design patterns for maintainable and reusable code. Integrated state management and lazy loading for optimized performance, with automated frontend workflows using CI/CD (unit testing and Dockerized deployments).

AI-Driven Development: I actively use tools such as GitHub Copilot, ChatGPT, Claude, Gemini, and V0 as collaborators throughout the development lifecycle. I create subagents to automate repetitive tasks, adapt projects to specific architectures, and standardize workflows across teams. Additionally, I integrate LLM models into applications, enabling intelligent features, automated documentation, and increased productivity during deployments and integrations.

Web3: Development of decentralized applications integrated with smart contracts, implementation of blockchain data indexing protocols (event indexing), and testing with Synpress and Playwright. Smart contract development and experience working with tokenized assets across multiple chains (EVM, Solana, XRPL, Celo)

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, TypeScript, SQL, Solidity.
- **Back-end:** Node.js, NestJS, Express.js, gRPC, Microservices, Redis, Queues (RabbitMQ, Kafka, Bull), WebSockets, CQRS, Events, JWT, Typeorm, Prisma, Caching, Security, Testing with Jest, SWC, SSE, Swagger OpenAPI.
- **Front-end:** HTML, CSS, Angular, Ionic PWAs, Electron, React (Next.js), Flutter, Tailwind, Telegramjs (Bot - miniapps), Rxjs.
- **Web3:** Wagmi, Viem, Reown, Rindexer, TheGraph, Circle Compliance Engine, Synpress, Playwright, Decentralized storage IPFS, Ethers.js, WalletConnect.
- **Blockchain :** Development of EVM smart contracts with Foundry, Development on XRPL, implementations using Xaman, Ganache, implementations of ERC-20, ERC-721,

ERC-1155, Cross-chain protocols, Defi implementations, creation of SPL-TOKEN in Solana and Solana Pay.

- **Databases:** MySQL, MongoDB, PostgreSQL, Redis, MySQL, DynamoDB.
- **Tools & Platforms:** Git, GitHub, Docker, PM2, Nginx.
- **Cloud Services:** Azure DevOps, AWS EC2, Lambda Functions, Linux.
- **Other:** VSCode, Cursor AI, Build MCPs with typescript sdk

PROFESSIONAL EXPERIENCE

Full Stack Web Developer

XpertGroup - Colombia

10/2025 – Present

- Full-stack development of the PuntosColombia website, a loyalty program platform that allows users to manage and redeem reward points.
- Development of responsive user interfaces using Angular and TypeScript for portal modules, point balance inquiries, transaction history, and the rewards catalog.
- Development of RESTful APIs for communication between the frontend and backend, handling CRUD operations for users, accounts, transactions, and redemption products.
- Development of a unit test suite and integration with Vitest and Mocha, achieving code coverage exceeding 85%.
- Integration of static code analysis with SonarQube to maintain quality standards and detect security vulnerabilities.
- Refactoring and optimization of legacy code, improving system maintainability and reducing technical debt.
- Integration of AWS services (DynamoDB for NoSQL storage, SNS for notifications) ensuring high availability and system scalability.
- Collaborative work in an agile team using Git for version control and Azure DevOps for sprint and deployment management.

Full Stack Web & Web3 Developer

Evolution Systems B.V. - Apeldoorn, Netherlands

09/2019 – 06/2025

- Developed a decentralized application for exchanging CSC tokens from the XRPL blockchain to other blockchains (XRP, ETH, BSC, SOLANA, AVAX) with an admin panel for statistics, transactions, bridge status, and users. Included a public API with an API gateway and a microservices system to handle each blockchain separately.

- Built a PWA for exchanging, buying, and selling NFTs on various XRPL network marketplaces, with an admin back-office for transaction verification, process management, offers, and payments.
- Created a P2P betting PWA on XRP Ledger and Solana integrated with a Telegram Bot and MiniApp, with an admin panel for payment verification, user transactions, and statistics.
- Contributed to the development of a decentralized poker application and APIs for CasinoCoin using Xumm, along with an admin back-office for user and operational management.
- Implemented a web application to search bets recorded on XRPL blockchain with back-office and APIs for user and statistics management.
- Participated in a location-based tracking application for potentially infected and confirmed COVID-19 cases.
- Developed an online roulette game interface (frontend and backend) for Cammegh.
- Installed and maintained Linux server services.
- Supported the development and maintenance of a desktop and mobile wallet for Casinocoin and Crazy8Token.
- Built an internal project management library with an admin panel for user and transaction verification.
- Developed a PWA using CasinoCoin blockchain to verify and store casino spins and bets in real-time on XRP Ledger (TrustTracker™).
- Provided software development, research, support, bug fixing, and API documentation using Swagger.

EDUCATION

Systems Engineering

Universidad de los Llanos, Villavicencio, Meta, Colombia

Graduated: 2017

- **Thesis:** Development of an event-driven asynchronous application for ECG biometric signal processing, visualization, and analysis.

CERTIFICATIONS & TRAINING

- **Decentralized finance (Defi)**, Duke university, 2024
- **Solidity 101**, Cyfrin Updraft, 2024
- **Flutter from Zero to Exper**, Udemy, 2023

- **R Programming**, Coursera, 2023

PROJECTS

spl-token-2022 Solana

- Created SPL token on Solana network.
- **Technologies:** TypeScript, solana/web3.js

ERC20 Avalanche, Ethereum, Binance Smart Chain

- Created ERC20 tokens on Avalanche, Binance Smart Chain, and Ethereum test networks.
- **Technologies:** Solidity, Foundry.

ERC721 NFT

- Created ERC721 NFTs on Sepolia and Celo test networks.
- **Technologies:** Solidity, Foundry.

Lottery Smart Contract

- Creation of smart contract lottery.
- **Technologies:** Solidity, Foundry, ChainLink.

NFT Marketplace

- Built NFT marketplace with dApp and smart contract.
- **Technologies:** Nextjs, wagmi, RainbowKit, viem, Solidity, Foundry.

Stable Coin

- Developed stablecoin dApp and smart contract.
- **Technologies:** Nextjs, wagmi, RainbowKit, viem, Solidity, Foundry.

Fund Me

- Created decentralized fundraising dApp and smart contract.
- **Technologies:** Nextjs, wagmi, RainbowKit, viem, Solidity, Foundry.

ADDITIONAL INFORMATION

- Currently studying AWS Cloud solutions Architecture Professional Certificate, Rust and Blockchain Business Models.
