## PROFESSIONAL SUMMARY

I am a Full Stack and Web 3 developer, specialized in Node.js and Angular, with +5 years of experience in creating, developing and deploying web applications and dApps. On the backend, I focus on application optimization and performance, ensuring scalability and delivering fast and fluid experiences for users. On the frontend, I use structured development patterns to solve common problems efficiently. In addition to my experience in web applications, I am passionate about developing dapps and mobile applications.

## Technical Skills

- **Programming Languages:** JavaScript, TypeScript, SQL, Solidity.
- **Frameworks and Libraries:** HTML, CSS, Node.js, Angular, Express.js, NestJS, Ionic, Electron, Flutter, Web 3, XRPL, Xaman, Solana, Solana Pay, Ethers.js, Microservices, Telegram.js (Bot - miniapps), Foundry.
- **Databases:** MongoDB, PostgreSQL, Redis, MySQL.
- **Tools and Platforms:** Git, GitHub, Docker.
- **Cloud Services:** AWS EC2, Linux
- **Other:** VSCode, ChatGPT

## PROFESSIONAL EXPERIENCE

### Full Stack Web Developer

Evolution Systems B.V., Apeldoorn, Netherlands

10/2022 – Present

- Development Dapp that serves as a bridge for the exchange of cryptocurrencies such as XRP, ETH, BSC, SOLANA, AVAX, among others, with its respective administrative panel for the visualisation of statistics, transactions, bridge statuses, among others.
- Implemented a PWA for the exchange, sale, and purchase of NFTs to and from other marketplaces on the XRPL Ledger network.
- Developed an administrative dashboard for transaction verification, process management, offers, and payments.
- Implemented a PWA for p2p betting on the XRP Ledger and Solana network with a Telegram bot and MiniApp, developed an administrative panel for payment verification and user transactions.
- Software development, research and development, support and bug fixing, source code management, and documentation.
- 
- Server installation and maintenance.

### Full Stack Web Developer

SISTEMAS SABIOS SAS, Llanogrande - Antioquia

09/2019 – 10/2022

- Collaborated on the implementation and maintenance of a desktop and mobile wallet based on the Cryptocurrency Casinocoin and Crazy8Token.
- Created a library for internal project management with an administrative panel for user and transaction verification.
- Implemented a PWA using blockchain powered by CasinoCoin to verify and store casino spins and bets in real-time on the XRP Ledger network (TrustTracker™).
- Software development, support and bug fixing, source code management, and documentation.

## Education

### Systems Engineer

Universidad de los Llanos, Villavicencio, Meta, Colombia

**Graduation Year:** 2017

- **Thesis:** Development of Event-Based Asynchronous Application for Processing, Visualization, and Analysis of ECG Biometric Signals

## Certifications and Training

- **Decentralized finance (Defi)**, Duke university, 2024
- **Solidity 101**, Cyfrin Updraft, 2024
- **Flutter de Cero a Experto**, Udemy, 2023
- **R Programming**, Coursera, 2023

## Projects

### ERC20-Avalanche and Solana

- Created tokens (ERC20) on the Avalanche testnet and Solana testnet on the Ethereum network.
- **Technologies Used:** Angular, Solidity, Foundry

## Additional Information

- Currently learning about smart contracts security.
