

Victor Hugo
Mosquera Alvarado

SENIOR FULLSTACK WEB & WEB3

Full-Stack & Web3 developer with 6+ years building scalable web apps, decentralized systems, and high-performance APIs. I ship clean, well-tested, production-ready code — solo or in distributed teams — applying clean architecture, DDD, and AI-driven workflows to accelerate delivery.

EXPERIENCE

Full-Stack Developer — Puntos Colombia (PCO)

10/2025 – present

XpertGroup · Colombia

Stack: Node.js · TypeScript · Fastify · Angular · AWS · Azure DevOps · Docker · Hexagonal Architecture · DDD

- Developed responsive UIs in **Angular & TypeScript** for a loyalty platform — point balance, transaction history, and rewards catalog modules.
- Built **RESTful APIs** handling CRUD operations for users, accounts, transactions, and redemption products.
- Migrated multiple functionalities from a monolith to a new microservice: authentication, session management, sale orders, travel products, and user deactivation.
- Integrated **AWS Cognito** for auth and token revocation, with multi-account access via **STS role assumption**.
- Integrated external services for order querying and payout processing.
- Managed infrastructure in **AWS SSM Parameter Store** and configured **SQS queues** for async inter-service communication.
- Set up local dev environments with **Docker Compose and LocalStack** to emulate AWS services.
- Integrated **SonarQube** for static code analysis, maintaining quality standards and detecting security vulnerabilities.
- Refactored and optimized legacy code, improving maintainability and reducing technical debt.
- Implemented **OpenAPI/Swagger** documentation and wrote unit + integration tests.
- Worked with **CI/CD pipelines in Azure DevOps** with auto-deployments per environment following Gitflow.

Full-Stack Web & Web3 Developer

09/2019 – 06/2025

Evolution Systems B.V. · Apeldoorn, Netherlands (remote)

Stack: Node.js · Angular · React · XRPL · Solana · EVM · NestJS · Microservices

- Built a **cross-chain DEX** for CSC tokens (XRPL → ETH, BSC, SOL, AVAX) with admin panel, public API gateway, and per-chain microservices.
- Developed a **PWA NFT marketplace** on XRPL with back-office for transaction verification and payment management.
- Created a **P2P betting PWA** on XRP Ledger and Solana integrated with a Telegram Bot and MiniApp.
- Contributed to a **decentralized poker dApp** using Xumm with full back-office and APIs.
- Developed **TrustTracker™** — a real-time PWA recording casino spins and bets on XRP Ledger.
- Built and maintained desktop/mobile wallets for CasinoCoin and Crazy8Token.
- Delivered full-stack for an online roulette interface for Cammegh.
- API documentation (Swagger), bug fixing, research, and Linux server administration.

NOTABLE PROJECTS

NFT Marketplace dApp

Next.js wagmi Solidity Foundry
