PROFESSIONAL SUMMARY

Full Stack Web & Web3 Developer Specializing in Node.js (Clean Architecture) and Angular (Design Patterns) with 5+ years of experience building scalable web applications, dApps, and high-performance backend systems. Strong problem-solving skills and ability to work independently.

Backend Expertise:

- Developed Node.js applications using Clean Architecture, ensuring modularity, testability, and scalability.
- Optimized RESTful APIs & microservices for performance and low-latency responses and Implemented CI/CD pipelines (GitHub Actions, Jenkins) for automated testing and deployment.

Frontend Mastery:

- Applied design patterns (Factory, Singleton, Facade) in Angular for maintainable and reusable code.
- Integrated state management and lazy loading for optimised performance, and automated frontend workflows with CI/CD (e.g., unit testing and Dockerized deployments).

Web3:

- Build dApps integrating them with smart contracts using Wagmi, Viem, and Ethers.js. Implement tokens (ERC-20, ERC-721) and experience working with NFT tokenized assets.

Technical Skills

- **Programming Languages:** JavaScript, TypeScript, SQL, Solidity.
- **Backend:** Node.js, NestJS, Express.js, Microservices, Redis, Queues, Kafka, WebSockets, gRPC, Events, JWT, Typeorm, Prisma, Caching, Security, Testing Jest, Swagger, SWC, SSE.
- **Frontend:** HTML, CSS, Angular, Ionic PWA, Electron, React, Flutter, Tailwind, Telegramjs (Bot - miniapps), Rxjs.
- **Blockchain:** Web3, EVM, XRPL, Xaman, Solana, Solana Pay, Wagmi, Viem, Smart Contracts, Decentralized storage IPFS, Ethers js, WalletConnect, Ganache, Foundry, ERC-20, ERC-721, ERC-1155, SPL-TOKEN, Cross-chain protocols and Defi.
- **Databases:** MySQL, MongoDB, PostgreSQL, Redis, MySQL.
- **Tools and Platforms:** Git, GitHub, Docker, PM2, Nginx.
- **Cloud Services:** AWS EC2, Lamda Functions, Linux.
- **Other:** VSCode, Cursor AI, Build MCPs with typescript sdk

PROFESSIONAL EXPERIENCE

Full Stack Web & web3 Developer

Evolution Systems B.V., Apeldoorn, Netherlands

09/2019 – Present

- Development Dapp that serves as a bridge for the exchange of cryptocurrencies such as XRP, ETH, BSC, SOLANA, AVAX, among others, with its respective administrative panel for the visualisation of statistics, transactions, bridge statuses, among others.

- Implemented a PWA for the exchange, sale, and purchase of NFTs to and from other marketplaces on the XRPL Ledger network. Developed an administrative Backoffice for transaction verification, process management, offers, and payments.
- Implemented a PWA for p2p betting on the XRP Ledger and Solana network with a Telegram bot and MiniApp, developed an administrative panel for payment verification and user transactions, stats, among others .
- Help implement a dapp and API for online poker games for CasinoCoin, using Xumm, A back office for administrative management of users, statistics, internal operational values, among others.
- Implementation of a web app for searching for bets placed on the XRPL blockchain, with backoffice and APIs for user management, statistics, and more.
- Collaborate in the implementation of a web application for location-based tracking of potentially infected and already infected individuals with COVID-19.
- Collaborate in the implementation of a web app (frontend and backend) for online roulette game interaction for the Cammegh company.
- Server installation and maintenance.
- Collaborated on the implementation and maintenance of a desktop and mobile wallet based on the Cryptocurrency Casinocoin and Crazy8Token.
- Created a library for internal project management with an administrative panel for user and transaction verification.
- Implemented a PWA using blockchain powered by CasinoCoin to verify and store casino spins and bets in real-time on the XRP Ledger network (TrustTracker™).
- Software development, research and development, support and bug fixing, source code management, and documentation.

EDUCATION

Systems Engineer

Universidad de los Llanos, Villavicencio, Meta, Colombia

Graduation Year: 2017

- **Thesis:** Development of Event-Based Asynchronous Application for Processing, Visualization, and Analysis of ECG Biometric Signals

Certifications and Training

- **Decentralized finance (Defi)**, Duke university, 2024
- **Solidity 101**, Cyfrin Updraft, 2024
- **Flutter de Cero a Experto**, Udemy, 2023
- **R Programming**, Coursera, 2023

Projects

spl-token-2022 Solana

- Created spl-token on solana network.
- **Technologies Used:** Typescript, solana/web3js

ERC20 Avalanche, ether, bnb

- Created tokens (ERC20) on the Avalanche, Binance smart chain and Ethereum testnet network.
- **Technologies Used:** Solidity, Foundry.

ERC721 NFT,

- Created Non Fungible token ERC721 in sepolia testnet.
- **Technologies Used:** Solidity, Foundry.

Lottery smart contract

- Created Non Fungible token ERC721 (NFT) in sepolia testnet.
- **Technologies Used:** Solidity, Foundry, ChainLink.

Additional Information

- Currently specializing in smart contracts security and auditing.
